

Motorcycle Carburetor for GY6 Engines

This motorcycle carburetor is designed for GY6 engines. It mixes air and fuel in the correct ratio to ensure efficient combustion across various operating conditions.

Product Overview

High-Performance Carburetor for GY6 Engines

This carburetor is a precision-engineered component designed specifically for GY6 engines, ensuring optimal fuel and air mixing for efficient combustion. Constructed from a durable blend of zinc and aluminum alloys, it is built to withstand the high temperatures and vibrations associated with motorcycle engine operation. It provides reliable performance across the entire power band, from smooth idling to full throttle, making it an ideal replacement or upgrade for your engine's fuel delivery system.

Technical Specifications

Construction Materials

Zinc • Aluminum

Item Number	MG-F21-012
Engine Compatibility	GY6
