

Motorcycle Carburetor Intake Manifold Joint Boot

This motorcycle carburetor intake manifold joint boot connects the carburetor to the engine cylinder head, providing a secure and airtight seal. It is constructed from durable rubber and metal materials, offering resistance to heat, oil, and fuel, and is compatible with CG125 engines.

Product Overview

High-Performance Intake Manifold Joint

This motorcycle carburetor intake manifold joint boot is engineered to provide a secure, airtight connection between the carburetor and the engine cylinder head. By preventing air leaks, it ensures optimal engine performance and consistent fuel delivery. Constructed from high-quality, durable rubber and metal, this component offers excellent resistance to heat, oil, and fuel, making it a reliable replacement part for maintenance and repair.

Technical Specifications

Key Features

- Airtight seal
- Heat resistant
- Oil and fuel resistant
- Flange mounting design

Engine Compatibility	CG125
Materials	Rubber, Metal
Mounting Method	Flange with mounting holes
