Product Overview

High-Performance Casting Wheels

These motorcycle casting wheels are engineered from a specialized aluminum alloy mixture, balancing lightweight properties with superior rigidity. Designed to dissipate heat effectively and prevent crack propagation, they offer a significant performance upgrade over traditional steel wheels. Whether for custom builds or replacements, these wheels provide enhanced handling, optimal balance, and a sleek aesthetic for discerning riders.

Material & Construction

Casting Techniques

- Gravity Casting
- Low Pressure Casting
- Negative Pressure Casting

Material Composition

Aluminum Alloy, Rigid Metal Additives

Performance Features

Key Benefits

Lightweight • Heat Dissipation • Crack Resistant • High Strength
