Product Overview

High-Performance Casting Wheels

These motorcycle casting wheels are engineered for superior handling, durability, and aesthetics. Crafted from premium alloy materials, they offer a significant weight reduction over traditional steel wheels while maintaining exceptional structural integrity. Designed for both street and track applications, these wheels provide optimal heat dissipation, balance, and stability for enhanced rider control.

Material & Construction

Casting Methods Used

- Gravity Casting
- Low Pressure Casting
- Negative Pressure Casting

Key Performance Benefits

Lightweight • Heat Dissipating • Crack Resistant • High Strength

Material Composition

Aluminum Alloy, Rigid Metal Mix

Design & Aesthetics

Available Finishes

- Chrome Finish
- Corrosion Resistant

Design Features

- Precision-engineered hub
- Robust spoke design
- Optimized balance
