

Motorcycle Cylinder Blocks

Motorcycle cylinder blocks are essential engine components responsible for housing the pistons and combustion chambers. These blocks are constructed from durable materials like cast iron or aluminum alloys to withstand high temperatures and pressures.

Product Overview

High-Performance Cylinder Blocks

These engine cylinder blocks are precision-engineered components designed to house pistons and combustion chambers reliably. Constructed from robust materials like cast iron and aluminum alloys, they are built to endure the extreme thermal and mechanical stresses of high-speed engine operation. Integrated cooling fins ensure efficient heat dissipation, maintaining peak performance and engine longevity for a wide variety of motorcycle applications.

Technical Specifications

Build Materials	Cast Iron, Aluminum Alloy
-----------------	---------------------------

Compatibility

Supported Models

Part Code	Application
H007	ASTRA
J006	JOG 27V
K001	K50
K005	KAZE-R
L001	LEAD50
M001	MATE90
M002	MAX100
QT004	ET900
R001	RS100
