

Motorcycle Electronic Control Unit (ECU)

This electronic control unit (ECU) is designed for motorcycles. It manages engine functions, such as ignition timing and fuel injection, to optimize performance.

Product Overview

High-Performance Motorcycle ECU

This electronic control unit (ECU) is engineered to optimize critical engine functions, including ignition timing and fuel injection management. Featuring a durable, compact design with a gold-colored housing, it is built to enhance motorcycle performance and reliability. The unit includes a pre-wired harness with standard connectors, facilitating a streamlined installation process for compatible motorcycle models.

Technical Specifications

Ignition System	DC-CDI
Key Features	High Performance, Stronger Output, Ignition Coil Management

Installation & Compatibility

Component Category Motorcycle Parts • Electronic Control Unit • Electrical System	
Installation Requirements	Professional installation is recommended to ensure proper integration with the motorcycle's electrical system.
