

Motorcycle Engine Crankcase Housing

This crankcase housing is designed for motorcycle engines. It is constructed from a lightweight alloy and features precision-machined bores and multiple mounting points.

Product Overview

High-Performance Crankcase Housing

This motorcycle engine crankcase housing is engineered for durability and precision. Constructed from a high-quality lightweight alloy, it features intricate internal structures and precision-machined bores designed to house bearings and critical engine components securely. Built to withstand the rigorous demands of high temperatures and internal pressures, this component ensures optimal engine integrity.

Technical Specifications

Sealing System

Leak-proof Assembly • Precision-machined

Part Identifier

A029

Material Composition

Lightweight Alloy
