

Motorcycle Engine Cylinder

This motorcycle engine cylinder is designed for optimal engine efficiency and durability. It features precision-engineered cooling fins for efficient heat dissipation and enhanced airflow.

Product Overview

High-Performance Cylinder Kit

This high-performance motorcycle cylinder kit is engineered for optimal engine efficiency and enhanced durability. Constructed from high-quality aluminum alloy, the unit offers a superior strength-to-weight ratio and features precision-engineered cooling fins for efficient heat dissipation. The kit includes all essential components for a complete replacement or upgrade, including the cylinder body, piston, piston rings, wrist pin, and circlips.

Technical Specifications

Engine Displacement

124.6 cm³
Displacement

Included Components

- Cylinder body
- Piston
- Piston rings
- Wrist pin
- Circlips

Material Composition

High-quality aluminum alloy

Performance Features

Performance Highlights

Efficient heat dissipation • Robust cylinder sleeve • Enhanced airflow ports • Lightweight construction
