

Motorcycle Engine Side Cover

This die-cast aluminum motorcycle engine side cover is precision machined with multiple mounting points and internal cavities. It features circular openings and a gasket groove for sealing, designed for integration within a motorcycle engine assembly.

Product Overview

Precision-Engineered Engine Side Cover

This motorcycle engine side cover is a high-quality, die-cast aluminum component designed for seamless integration into engine assemblies. It features precision-machined mounting points and a dedicated gasket groove to ensure a reliable, leak-free seal. Its complex geometry and robust construction make it an essential replacement or upgrade part for maintaining engine integrity.

Technical Specifications

Finish

Metallic Finish • Precision Machined

Design Features

- Multiple mounting points
- Internal cavities
- Circular openings
- Gasket groove for sealing

Material

Die-cast Aluminum

Application

Motorcycle Engine Assembly, Replacement Part
