

Motorcycle Gear Position Indicator Switch

This motorcycle gear position indicator switch is designed for motorcycles and parts applications. It provides accurate and reliable gear position feedback to the rider, enhancing safety and control.

Product Overview

Reliable Gear Position Feedback

This gear position indicator switch is a critical component designed specifically for motorcycle gear systems. It provides accurate and real-time feedback to the rider regarding the current gear selection, ensuring enhanced safety and control during operation. Built with durable materials, this switch is engineered to withstand the demanding environment of motorcycle use and features a robust cable and connector system for secure, easy installation.

Technical Specifications

Model Compatibility	ZJ-125
Component Type	Gear Position Indicator Switch

Features

Key Features

- Accurate gear position feedback
- Durable construction for long-term reliability
- Robust cable and connector assembly
- Designed for easy installation

Application

Intended Use	Motorcycles, Replacement Parts, Gear Systems
