

Motorcycle Lithium-Ion Starter Battery

This lithium-ion battery is designed for motorcycles and specialty vehicles. It features 12.8V, a cold cranking amperage (CCA) of 435A at 25°C for 5 seconds, and an energy capacity of 89.6 Wh/Hr.

Product Overview

High-Performance Lithium-Ion Starter Battery

This lithium-ion starter battery is engineered for motorcycles and specialty power sports vehicles, offering a significant upgrade over traditional lead-acid options. It features an ultra-lightweight design that is one-third the weight of standard batteries while delivering superior cranking power and stable discharge voltage. With an exceptionally long cycle life and rapid charging capabilities, it provides reliable performance for demanding automotive and recreational applications.

Technical Specifications

Voltage	12.8 V
Energy Capacity	89.6 Wh
Cold Cranking Amps (5s @ 25°C)	435 A

Performance Metrics

Key Performance Metrics

2000 cycles
Cycle Life

6 min
Recharge Time

1 year
Storage Life

Features & Benefits

Product Highlights

- Ultra-lightweight design (1/3 the weight of lead-acid)
- Eco-friendly construction (no acid or heavy metals)
- Rapid charging capability (up to 10C current)
- High discharge stability for consistent engine performance
- Low self-discharge rate

Applications

Compatible Applications

Motorcycle, Lawn Mower, Jet Ski, Snowmobile, Water Craft

Compliance

Compliance Standards
