

Motorcycle Rear Axle Assembly

Rear axle assembly designed for motorcycle applications. It features a differential housing, axle shafts, brake drums, and associated suspension mounting points.

Product Overview

High-Performance Rear Axle Assembly

This rear axle assembly is engineered specifically for motorcycle applications requiring robust rear-wheel drive performance. The unit features an integrated differential housing, durable axle shafts, and integrated brake drums for reliable stopping power. Designed with precision mounting points for suspension systems, it ensures longevity and consistent performance under various riding conditions.

Technical Specifications

Included Components

- Differential housing
- Axle shafts
- Brake drums
- Suspension mounting points

Application

Motorcycle • Rear-wheel drive
