

Motorcycle Rear Axle Assembly with Differential

This heavy-duty motorcycle rear axle assembly is designed for robust performance and durability. The axle features a central differential housing with mounting brackets, connected to two outer wheel hubs via axle shafts.

Product Overview

Robust Rear Axle Assembly

This heavy-duty motorcycle rear axle assembly is engineered for durability and consistent performance. Featuring a central differential housing with integrated mounting brackets, it is designed to facilitate smooth power transfer to the wheels. The assembly includes two outer wheel hubs with bolted flanges, ensuring secure wheel attachment and reliable operation for repair or customization projects.

Technical Specifications

Ideal Applications

- Motorcycle customization
- Vehicle repair
- Performance upgrades

Surface Finish	Black anti-corrosion coating
Key Features	Differential Housing, Heavy-duty Construction, Bolted Wheel Flanges, Corrosion Resistant
