

Motorcycle Ride Dampening Shock Absorber

These motorcycle shock absorbers are engineered for superior ride comfort and handling. Their robust design includes durable springs and hydraulic damping to effectively absorb bumps and vibrations, enhancing stability and control.

Overview

High-Performance Ride Comfort

These motorcycle shock absorbers are engineered to deliver superior ride comfort and handling across diverse riding conditions. Featuring robust construction with durable springs and advanced hydraulic damping, they effectively neutralize bumps and vibrations for improved stability. This component is designed to provide professional riders and mechanics with a reliable, long-lasting solution for enhancing overall motorcycle control.

Technical Specifications

Damping Type	Hydraulic Damping
Construction Materials	Heavy-duty Steel, Hydraulic Fluid, Reinforced Spring

Performance Features

Performance Benefits

- Superior vibration absorption
- Enhanced handling and stability
- Durable construction for long service life
- Optimized for various riding conditions

Key Performance Metrics

100 %
Damping Efficiency
