

Motorcycle Spark Plug

These spark plugs are primarily made from high-grade aluminum oxide in porcelain, nickel-copper, platinum, and iridium. The spark plugs offer excellent cooling and interference protection.

Overview

High-Performance Motorcycle Spark Plug

This high-performance motorcycle spark plug is engineered for optimal combustion and reliable ignition across a variety of engine types. Featuring a copper core electrode and multi-layer gaskets, it ensures superior heat dissipation and effective sealing to improve fuel efficiency and reduce emissions. With a nickel-plated housing and high-purity alumina insulator, this component is built to withstand extreme engine temperatures and resist corrosion for a long service life.

Technical Specifications

Insulator Purity	95% pure alumina
Core Material	Copper
Housing Finish	Nickel-plated
Compatible Models	A7TC, C56

Performance Features

Performance Advantages

- Multi-ribbed insulator prevents flash over
- Heat crimping process ensures gas-tight fit
- Conductive glass inner sealing
- Elastic multi-layer gaskets
- Enhanced heat dissipation prevents overheating

Durability Ratings
