

Motorcycle Speedometer Cable

This motorcycle speedometer cable transmits rotational motion from the wheel to the speedometer. The cable features a protective outer sheath and fitted connectors.

Product Overview

Precision Speedometer Transmission

This high-durability speedometer cable is engineered for reliable rotational motion transmission in motorcycle speedometers. Featuring a flexible wire core encased in a robust protective outer sheath, it ensures accurate speed readings while resisting environmental wear. Designed for professional replacement and repair applications, this cable provides a seamless connection between the vehicle's transmission or wheel hub and the instrument cluster.

Technical Construction

Design Features

- Flexible central wire core
- Durable black protective outer sheath
- Threaded end connectors
- Transmission-to-speedometer interface

Component Status

Replacement Part • Mechanical Component

Application

Motorcycle, Speedometer, Drivetrain, Instrument Calibration
