

Motorcycle Starter Motor

This product includes two motorcycle starter motors, essential components for initiating the engine's combustion process. Each motor features a robust construction with a metallic housing, ensuring durability and resistance to wear and tear.

Product Overview

High-Performance Motorcycle Starter Motor

This motorcycle starter motor is engineered to provide consistent and efficient starting power for a wide range of motorcycle models. Featuring a robust metallic housing, the unit is built for durability and long-term resistance to wear and tear. The design incorporates a precision-engineered splined shaft to ensure secure engagement with the engine's starting mechanism, while the electrical connections are fully insulated to prevent short circuits and maintain reliable performance.

Technical Specifications

Housing Material	Metallic
Engagement Mechanism	Splined shaft
Safety Features	Well-insulated connections, Short-circuit protection

Application

Compatibility	Universal fit for a range of motorcycle models
