

# Motorcycle Stator and Flywheel Assembly

This motorcycle stator and flywheel assembly generates electrical power for the engine. It ensures reliable operation of the battery, ignition system, and other electrical accessories.

## Product Overview

### High-Performance Electrical Assembly

This motorcycle stator and flywheel assembly is designed to serve as the core of your vehicle's electrical power generation system. Featuring high-quality copper windings and a precision-engineered laminated core, the stator works in tandem with the magnetic flywheel to reliably produce alternating current (AC). This essential component ensures consistent battery charging, stable ignition performance, and reliable power for all onboard electrical accessories.

## Technical Specifications

### Materials

- Copper windings
- Laminated core
- Metallic rotor

### Core Functions

**1 AC**

Power Generation

### Component Type

Stator, Flywheel, Electrical Assembly

## Compatibility & Features

### Key Features

Integrated Magnets • Crankshaft Compatible • Pre-wired Assembly
