

Motorcycle Steering Knuckle

This motorcycle part is a knuckle, constructed from durable metal with a T-shaped design. It features welded joints for enhanced strength and threaded ends for secure connections, suitable for use in a motorcycle's steering or suspension system.

Product Overview

High-Performance Steering Component

This motorcycle steering knuckle is engineered for precision and reliability in suspension and steering systems. Featuring a robust metal construction with a specialized T-shaped design, it provides the necessary stability and pivotal movement required for motorcycle handling. The component utilizes welded joints to ensure structural integrity and enhanced durability under operational stress.

Technical Specifications

Construction	Robust metal construction with welded joints
Design Geometry	T-shaped
Connection Interface	Threaded ends

Application

Primary Function

- Steering system
- Suspension system

Key Benefits

High Stability • Pivotal Movement • Enhanced Durability
