

Motorcycle Swing Arm Bushings

High-quality bushings designed for motorcycle swing arms within suspension systems. They provide smooth, reliable movement, reducing friction and ensuring long-lasting performance.

Overview

Precision Engineered Suspension Components

These high-quality swing arm bushings are specifically designed to enhance motorcycle suspension systems. Engineered for durability and smooth operation, they effectively reduce friction and wear within the swing arm assembly. Their precision construction ensures an optimal fit, contributing to improved handling and long-lasting performance across compatible motorcycle models.

Compatibility

Model Identifier	JH125
------------------	-------

Performance

Key Performance Benefits

- Smooth and reliable movement
- Reduced friction
- Minimized wear
- Improved handling

Construction

Application	Motorcycle Suspension, Swing Arm System
