

Motorcycle Three-in-One Sensor

This three-in-one sensor is designed for motorcycle applications. The integrated unit measures parameters such as throttle position, temperature, and pressure.

Product Overview

Integrated Motorcycle Sensing Solution

This three-in-one sensor is engineered specifically for motorcycle electronic control systems. By combining multiple sensing functions into a single, compact housing, it streamlines the vehicle's electrical architecture and simplifies the installation process. The unit features a durable construction with reinforced mounting points, ensuring reliable performance in demanding motorcycle operating environments.

Technical Specifications

Sensor Configuration	3-in-1 Integrated Sensor
Housing Material	Reinforced black plastic
Mounting Reinforcement	Yes

Compatibility

Primary Application	Motorcycle, Automotive Electronics
---------------------	------------------------------------
