

Motorcycle Tire Pressure Monitoring System

This tire pressure monitoring system (TPMS) is designed for motorcycles. It offers real-time monitoring of tire pressure and temperature to enhance safety and performance.

ADDITIONAL IMAGES

Product Overview

Professional Motorcycle Safety Monitoring

This advanced Tire Pressure Monitoring System (TPMS) provides real-time oversight of tire pressure and temperature to enhance rider safety. Engineered specifically for motorcycles, the system alerts drivers to hazardous under-inflation, helping to prevent accidents, optimize fuel economy, and reduce uneven tire wear. It features durable construction and a reliable electronic architecture to ensure longevity under demanding road conditions.

Technical Specifications

Power Features

- Intelligent sleeping mode for power saving
- Motorcycle powered display
- Extended battery life (>1 year)

Sensor Technology

External Sensors, Infineon IC, Aviation Aluminum Nozzle

Model Number

ET-910AE

Key Performance Metrics

System Capabilities

1 year

Battery Life

2 units

Supported Tires
