

Motorcycle Transmission Gear with Splines

This precision-engineered motorcycle gear features external teeth and internal splines. It is constructed from durable metal for reliable power transmission and long-lasting performance.

Product Overview

Precision-Engineered Transmission Component

This motorcycle transmission gear is designed for high-performance power delivery and reliable operation. Featuring precision-cut external teeth and internal splines, it ensures a secure, slip-free mounting on the transmission shaft. Engineered from durable, high-strength metal, this component is built to withstand the demanding conditions of motorcycle drivetrain systems.

Technical Specifications

Construction Material	Durable Metal
Design Features	External Teeth, Internal Splines, Precision Engineered

Application

Component Type

Motorcycle Transmission • Drivetrain
