

# Motorized Wheel for Mobility Devices

This motorized wheel is designed for electric wheelchairs and similar mobility devices. The integrated motor delivers efficient power, while durable construction ensures reliability and longevity for enhanced mobility and maneuverability.

## Product Overview

### High-Performance Mobility Solution

This motorized wheel is precision-engineered for electric wheelchairs and mobility devices, offering a robust solution for enhanced maneuverability. Constructed from durable aluminum alloy and high-strength polymers, it ensures long-term reliability in various environments. The design integrates a high-efficiency electric motor and a precision bearing system to deliver smooth, consistent power for both indoor and outdoor use.

## Technical Specifications

### Environment Compatibility

Indoor • Outdoor

### Key Features

- Integrated electric motor
- Knobby tire tread pattern
- Precision bearing system

### Materials

Aluminum Alloy, High-Strength Polymer

## Performance Metrics

### Performance Highlights

**1 Knobby**
