

Mounted Bearing Units with Housings

Mounted bearing units, also known as pillow block bearings, consist of a bearing housed within a mounting bracket. These accessories provide support and facilitate rotational movement in machinery and industrial applications.

Overview

Professional Mounted Bearing Units

These mounted bearing units, commonly referred to as pillow block bearings, are essential components designed to support rotational shafts in industrial machinery. Each unit integrates a high-quality bearing within a robust mounting bracket, simplifying installation and ensuring precise alignment. Available in various housing configurations such as square flange, oval flange, and standard pillow block designs, these units provide reliable support and facilitate smooth mechanical operation across diverse applications.

Technical Specifications

Common Model Series

- FB210
- UC205

Installation Benefit

Easy Installation • Simplified Alignment

Available Housing Configurations

Square Flange, Oval Flange, Pillow Block

Primary Function

Support and facilitate rotational movement in machinery
