

Mounted Disc Plough for Four-Wheel Tractors

This mounted disc plough is designed for use with four-wheel tractors. It is engineered to cut stems and roots with less working resistance.

Overview

High-Efficiency Mounted Disc Plough

This mounted disc plough is specifically engineered for four-wheel tractors, designed to streamline soil preparation and cultivation tasks. Featuring a robust round pipe frame, it offers exceptional durability and stability even in challenging soil conditions. The independently rotating discs efficiently cut through vegetation and soil, ensuring optimal aeration and seedbed preparation for various farming applications.

Key Features

Performance Advantages

- Non-winding design prevents grass accumulation
- Anti-blocking mechanism for smooth operation
- No hip building-up during tillage
- Efficiently cuts through stems and roots
- Reduced working resistance

Design Highlights

Round Pipe Frame, Mounted Configuration, Tractor Matched, Adjustable Settings

Application

Suitable Soil Conditions

Weedy Land • Stems/Roots Present • Frictional Soil • Rocky Soil (Small Brick)

Primary Applications

- Primary Tillage
- Secondary Tillage
- Seedbed Preparation
