Product Overview

Professional Mounted Disc Plough

This high-performance mounted disc plough is engineered for efficient land preparation, specifically designed to handle challenging soil conditions including weeds, stems, and frictional soil with debris. The unit features a robust round tubular frame construction that ensures stability and durability during heavy-duty agricultural operations. Its unique design minimizes working resistance and prevents grass winding or clogging, promoting smooth operation for medium to large tractors.

Performance Features

Operational Advantages

- Non-clogging performance
- Effective stem and root cutting
- Low working resistance
- No grass winding
- Prevents soil hip build-up
