

Mounted Disc Plough with Round Tube Frame

This mounted disc plough is designed to cut stems and roots effectively with less working resistance. Its round tube frame ensures durability for 4-wheel tractor use.

Overview

Robust Primary Tillage Solution

The Mounted Disc Plough with a Round Tube Frame is engineered for efficient primary tillage and soil preparation. Designed for compatibility with four-wheel tractors, it excels in challenging field conditions, including soil with weeds, stems, and frictional elements like small bricks. Its heavy-duty construction ensures durability, while the independently rotating discs provide effective soil cutting, turning, and aeration for optimal seedbed preparation.

Key Features

Operational Advantages

- Non-winding design prevents grass accumulation
- Anti-blockage system for continuous operation
- No hip building-up during soil engagement
- Efficiently cuts through tough stems and roots
- Low working resistance for improved tractor efficiency

Technical Specifications

Frame Construction	Round Tube Frame
Tractor Compatibility	4-Wheel Tractor
Ideal Soil Conditions	Weedy fields, Stem-heavy soil, Frictional soil, Soil with small debris
