

Mud Pump Fluid End Module

This high-pressure fluid end module is designed for mud pumps. It features robust construction with multiple ports and bolted connections for enhanced durability and operational reliability.

Product Overview

High-Performance Fluid End Module

This high-pressure fluid end module is engineered for demanding oilfield drilling environments, offering robust construction for superior operational reliability. Designed to meet or exceed API-7K standards, the module features a heavy-duty metallic body capable of handling abrasive fluids efficiently. It is fully exchangeable with OEM products, ensuring seamless integration into existing mud pump systems.

Compliance & Quality

Industry Standards

API-7K, API Certified

Technical Specifications

Design Features

- High-pressure design
- Multi-piece construction
- Robust metallic body
- Multiple ports
- Bolted connections

Compatibility

Exchangeable with OEM products

Part Identifier

7K-0448

Applications

Operational Suitability

Oilfield Drilling • High-Pressure Applications • Abrasive Fluid Handling
