

Mud Pump Piston

This mud pump piston is made of premium materials. It is exchangeable with OEM products and meets API-7K standards.

Product Overview

High-Performance Mud Pump Piston

Engineered for demanding industrial drilling applications, this mud pump piston is designed to withstand harsh environments while maintaining reliable operation. Its robust construction features a durable red polyurethane outer layer bonded to a precision-machined metallic core, offering superior wear resistance and sealing capabilities. Ideally suited for oil and gas drilling, this component ensures extended service life and enhanced pump efficiency under high-pressure conditions.

Technical Specifications

Key Features

- High-pressure resilience
- Wear-resistant outer layer
- Precision-machined central bore
- Includes integrated wear rings

Part Number

7K-0448

Construction Materials

Polyurethane, Metallic Core

Performance

Performance Highlights

1 High

Wear Resistance

1 Excellent

Sealing Capability

Compatibility & Use

Primary Applications

Oil & Gas Drilling • Industrial Mud Pumps
