

Multi-Cartridge Filter Housing

These multi-cartridge filter housings are constructed from stainless steel. They accommodate multiple filter cartridges to provide enhanced flow rates and contaminant holding capacity.

Overview

High-Efficiency Filtration Solution

The Multi-Cartridge Filter Housing is designed for demanding high-purity filtration applications across industrial sectors. Engineered from durable stainless steel, these housings accommodate multiple filter cartridges to significantly increase flow rates and contaminant holding capacity. This robust design is ideal for water treatment, chemical processing, and pharmaceutical manufacturing facilities.

Technical Specifications

Availability

- Various sizes
- Various configurations

Material	Stainless Steel
Suitable Industries	Water Treatment, Chemical Processing, Pharmaceutical Manufacturing

Performance Highlights

Performance Advantages

1 Grade

High Purity

2 Capacity

Enhanced Flow Rate
