

Multi-Cavity Blow Mold

This multi-cavity blow mold is designed for producing multiple identical parts simultaneously. It is constructed from durable metal and features precision-engineered cavities and venting for accurate, consistent part formation.

Overview

High-Efficiency Multi-Cavity Blow Mold

This multi-cavity blow mold is precision-engineered for the high-volume production of plastic containers and components. Designed to produce multiple identical parts simultaneously, it features advanced venting and cooling systems to ensure consistent part formation and minimized cycle times. Built from durable metal, the mold includes integrated mechanisms for precise alignment and secure clamping, making it an ideal solution for demanding industrial manufacturing environments.

Technical Specifications

Production Capability	Multi-cavity simultaneous production
Material Construction	Durable industrial metal
Key Features	Precision-engineered cavities, Optimized venting, Efficient cooling system, Integrated ejection system, Secure clamping alignment

Performance

Operational Benefits

- Maximizes productivity through multi-part molding
- Minimizes cycle times via efficient cooling
- Ensures consistent part formation
- High-volume production ready
