

Multi-Cavity Cap Mold

This precision-engineered cap mold is designed for high-volume production. It features a multi-cavity configuration and advanced cooling channels for optimal temperature control.

Product Overview

High-Efficiency Cap Production

This precision-engineered multi-cavity injection mold is designed specifically for high-volume manufacturing of plastic caps. Built with high-quality tool steel, it ensures durability and consistent dimensional accuracy for long-term industrial use. The design incorporates advanced cooling channels and reliable ejection mechanisms to optimize cycle times and maintain superior part quality.

Technical Specifications

Construction Material	High-quality tool steel
Key Features	Multi-cavity configuration, Advanced cooling channels, High dimensional accuracy, Reliable ejection system

Performance Metrics

Performance Highlights

1 High-Volume
Production Efficiency

1 Optimized
Thermal Management

Compatibility

Machine Compatibility	Standard injection molding machines
