

Multi-Channel Conference Microphone System with Mute Switch

This conference microphone system utilizes Sync IR and PLL technology. It features four conference microphones and a mute switch at the bottom of the transmitter.

Product Overview

Professional Multi-Channel Conference Solution

The PU-4638 is a professional conference microphone system engineered for clear audio capture in meeting rooms and halls. Featuring four channels with individual controls and displays, this system offers flexible connectivity through balanced XLR and unbalanced outputs. Its UHF wireless design with PLL technology ensures stable transmission for reliable performance in professional environments.

Technical Specifications

Frequency Range	620-950 MHz
Frequency Response	40Hz - 18KHz
Operating Range	60 m
Channels	4
Transmitter Power Supply	1.5V x 2

Features

Core Features

- UHF Wireless connectivity
- PLL synthesized design
- Sync IR technology
- Integrated mute switch on transmitter base
- Individual channel controls

Connectivity Options	Balanced XLR, Unbalanced Output
