

Multi-Color Injection Molding Machine

This injection molding machine is designed for producing multi-colored plastic parts. It features a robust construction and a control panel for precise injection molding.

Overview

Advanced Multi-Material Injection Solutions

This series offers a sophisticated range of multi-color injection molding machines designed with a modular structure to meet diverse manufacturing needs. Modeled on high-performance standards, these machines provide precise control for complex multi-material processes, ensuring aesthetic appeal and functional complexity in finished parts. The system is built for versatility, supporting various configurations from 2-color to 4-color production.

Technical Capabilities

Injection Units

- RP Rotary Platen
- TP Indexing Unit
- SW Sandwich Injection Unit

Available Configurations

L-Type, V-Type, P-Type, 3-Color, 4-Color

Control System

System Architecture

Modular • Expandable

Control Software

One System For All Machine

Design Features

Precision Components

- Rotary Platen
- Indexing Unit
- Sandwich Unit
- Material Feeding System
- Safety Enclosure

Construction Style

Compact European-style design with robust base and integrated control panel
