

Multi-Component Injection Mold

This injection mold is designed for producing multi-component parts. It allows for the combination of different materials or colors in a single molding cycle.

Product Overview

Professional Injection Molding Solutions

This multi-component injection mold is engineered for high-precision manufacturing, specializing in two-component and two-color production techniques. Designed to meet the demanding requirements of industrial molding applications, this solution enables the production of complex, multi-material parts. It offers reliability for businesses looking to enhance their manufacturing capabilities through advanced double-color molding processes.

Capabilities

Molding Capabilities

Two-component injection molding, Two-color molding, Rotational molding

Manufacturing Specs

Design Features

- Specialized two-color mold design
- Advanced rotational mold configuration
- High-precision multi-component integration
