

Multi-Conductor Communication Cable

This multi-conductor communication cable is designed for transmitting signals and data in electronic communication systems. It consists of multiple insulated conductors twisted or bundled together to reduce interference and ensure reliable signal transmission.

Product Overview

High-Performance Communication Cable

This multi-conductor communication cable is engineered for reliable signal and data transmission across various electronic systems. Featuring multiple insulated conductors bundled within a durable gray outer jacket, it is designed to minimize interference and maintain signal integrity. This versatile cable is an ideal solution for complex installations in telephone systems, data networks, and industrial control environments.

Technical Specifications

Construction	Multi-conductor bundle with insulated wires
Jacket Color	Gray

Applications

Key Benefits

- Reduced signal interference
- Reliable data transmission
- Versatile installation compatibility

Primary Applications	Telephone Systems, Data Networks, Control Systems
----------------------	---
