

Multi-Conductor Control Cable with Circular Connector

This multi-conductor control cable is designed for control applications. It features a circular connector on one end and exposed wire leads on the other.

Product Overview

Industrial Control Connectivity

This multi-conductor control cable is engineered for reliable signal transmission in demanding industrial environments. Featuring a robust circular connector on one end and exposed leads on the other, it allows for seamless integration into complex electronic systems. The durable design ensures consistent performance for control and automation applications.

Physical Characteristics

Cable Type	Multi-Conductor Control Cable
Connector Type	Circular Metallic Connector
Cable Color	Black

Features

Design Highlights

- Robust metallic connector housing
- Multi-colored internal wiring for easy identification
- Pre-terminated circular connection
- Exposed leads for flexible installation

Suitability	Industrial Automation, Electronic Control, Signal Transmission
