

Multi-Conductor Power Cable for Electrical Transmission

This multi-conductor cable is used in electrical power transmission and distribution systems. Its robust outer jacket provides protection against environmental factors and mechanical stress.

Product Overview

High-Performance Multi-Conductor Power Cable

Designed for demanding electrical transmission and distribution systems, this multi-conductor cable offers superior reliability and durability. It features a robust multi-layered construction, including specialized inner insulation for each conductor and a protective outer jacket engineered to resist UV exposure and mechanical abrasion. This cable is an ideal solution for professional applications requiring consistent performance under harsh environmental conditions.

Construction & Design

Layer Composition

- Individual wire insulation
- Inner protective insulation layer
- Robust outer jacket

Key Features

Multi-conductor design, UV resistant, Abrasion resistant, Heavy-duty insulation

Application

Primary Application

Electrical power transmission and distribution systems
