

Multi-Conductor Shielded Control Cable

This multi-core control cable has multiple layers of insulation and shielding. It is designed for control and instrumentation applications, providing reliable signal transmission and protection against electromagnetic interference.

Overview

Professional Control & Instrumentation Cable

This multi-conductor shielded control cable is engineered for demanding industrial control and instrumentation applications. Featuring a robust design with multiple layers of insulation and high-grade copper shielding, it ensures reliable signal transmission while providing superior protection against electromagnetic interference. The durable outer jacket is built to withstand harsh environments, making it an ideal choice for complex electrical systems.

Construction

Shielding	Copper Shielding
Outer Jacket	Durable Black Jacket
Conductor Configuration	Multi-core, individually insulated

Features

Key Benefits	EMI Protection, Signal Integrity, Industrial Grade, High Durability
--------------	---------------------------------------------------------------------

Applications

Primary Applications

- Control Systems
- Instrumentation
- Signal Transmission
