

Multi-Core Optical Fiber Cable

This multi-core optical fiber cable is designed with an outer jacket and wrapped layers. It provides data transmission and protects the optical fibers within.

Product Overview

High-Performance Multi-Core Optical Fiber Cable

This multi-core optical fiber cable is engineered for robust data transmission in demanding environments. Featuring advanced construction, it incorporates non-metallic strengthening components, wrapped layers, and tight-sleeved optical fiber bundles to ensure signal integrity and durability. The protective outer jacket provides essential shielding, making this an ideal solution for reliable, high-speed connectivity.

Construction Details

Internal Construction

- Outer Jacket
- Wrapped Layers
- Non-metallic Strengthening Component
- Tight-sleeved Optical Fiber Bundles

Strengthening Type

Non-metallic

Application

Primary Application

Data transmission and optical fiber protection
