

Multi-Core Shielded Data Cable

This multi-core shielded cable is designed for data transmission and signal integrity. It features a foil shield and drain wire for effective grounding, along with an outer jacket for protection against abrasion and environmental factors.

Product Overview

High-Performance Data Transmission

This multi-core shielded data cable is engineered for superior signal integrity and reliable data transmission in demanding environments. Featuring multiple twisted pairs of insulated conductors, it is specifically designed to minimize electromagnetic interference (EMI) and crosstalk. With a robust outer jacket and integrated foil shielding with a drain wire, this cable ensures long-term durability and effective grounding for professional applications.

Construction & Design

Jacket Protection

Abrasion Resistant • Environmental Protection

Shielding	Foil Shield, Twisted Pairs
Grounding	Yes

Technical Specifications

Primary Application	Data transmission and signal integrity
