

Multi-Cylinder Diesel Engine for Power Generation

This multi-cylinder diesel engine is designed for power generation applications. The engine features a robust construction with a belt-driven cooling fan and includes a fuel injection system.

Overview

Reliable Power Generation Engine

This multi-cylinder diesel engine is engineered specifically for power generation, water pump, and marine applications. With over a decade of development, it offers a stable, low-noise, and low-vibration performance profile. Its compact design and standardized SAE connection ensure seamless integration into various generator and pumping systems.

Technical Specifications

Performance Metrics

1500 rpm

Rated Speed

14 kw

Power Output

Model

480D

Design & Build

Key Advantages

- Low-speed regulation for stable operation
- Minimized vibration and noise levels
- Compact structure for space-efficient installation
- Standardized SAE connection for easy assembly
- Energy-saving and durable construction

Primary Applications

Power Generation, Water Pumps, Marine Power
