

Multi-Flute End Mills

These end mills are designed for precision cutting and shaping in various machining applications. The multi-flute configuration ensures efficient material removal and a smooth surface finish.

Overview

High-Performance End Mill Solutions

These multi-flute end mills are engineered for precision machining, offering efficient material removal and superior surface finishes. Constructed from durable materials including carbide and high-speed steel, they are designed for extended tool life and wear resistance. They are versatile tools suitable for a wide range of applications such as milling, slotting, profiling, and contouring across steel, aluminum, and plastics.

Technical Specifications

Compatible Materials

- Steel
- Aluminum
- Plastics

Applications

Milling • Slotting • Profiling • Contouring

Material Composition

Carbide, High-Speed Steel

Surface Finish

Bright finish

Features

Key Performance Indicators

3 pcs
