

Multi-Grip Blind Rivets

Multi-grip blind rivets are versatile fasteners designed to clamp materials together securely. They accommodate a wide range of material thicknesses, reducing the need for multiple rivet sizes.

Product Overview

Versatile Fastening Solution

Multi-grip blind rivets are versatile fasteners engineered to securely clamp materials together across a wide range of thicknesses, significantly reducing the need for multiple rivet sizes. These fasteners consist of a durable rivet body and a setting mandrel that ensures a permanent, secure connection once installed. Ideal for applications where material thickness varies or is not precisely known, they are a staple in sheet metal fabrication, automotive assembly, and general manufacturing.

Technical Details

Primary Components

- Rivet Body (Shell)
- Setting Mandrel

Fastener Type	Blind Rivet
Design	Multi-grip (wide grip range)

Applications

Key Benefit

Variable Grip Range

Common Industries	Sheet Metal Fabrication, Automotive Assembly, General Manufacturing
-------------------	---
