

Multi-Head Embroidery Machine for Garments and Shoes

This multi-head embroidery machine is designed for garment, shoe, and accessory embellishment. It features multiple needle heads for simultaneous embroidery, enhancing production efficiency.

Product Overview

High-Efficiency Multi-Head Embroidery System

This multi-head embroidery machine is engineered specifically for the high-volume embellishment of garments, shoes, and various accessories. Featuring multiple needle heads, it enables simultaneous embroidery across several items, significantly boosting production throughput. The system incorporates precision stitching mechanisms to ensure consistent, high-quality results across diverse fabric types, supported by an advanced control interface for seamless pattern design and customization.

Key Features

Performance Highlights

1 multi-head

Simultaneous Head Operation

Capabilities

Mass Production, Garment Embroidery, Shoe Embellishment, Accessory Customization

Technical Specifications

Suitable Materials & Items

- Garments
- Footwear
- Accessories

Control System

Advanced digital control system for pattern design and customization
