

Multi-Head Embroidery Machine for Textile Production

This multi-head embroidery machine is engineered for high-volume textile production. It features multiple embroidery heads for simultaneous stitching, thereby increasing efficiency.

Product Overview

High-Efficiency Multi-Head Embroidery

This professional-grade multi-head embroidery machine is engineered specifically for high-volume textile production environments. It features multiple synchronized heads that allow for simultaneous stitching, significantly boosting output efficiency and consistency. Built with a rugged frame for long-term durability, the system incorporates advanced control technology for precise pattern execution and optimized thread management across various textile applications.

Technical Specifications

Production Type

High-Volume • Industrial

Suitable Applications

- Apparel
- Home Textiles
- Promotional Items

Model Number

GG732-920

Performance Metrics

Key Operational Benefits

Simultaneous Stitching, Advanced Thread Management, Precise Pattern Control, Rugged Construction
