

Multi-Head Embroidery Machine

This high-speed multi-head embroidery machine is designed for efficient and precise embroidery on various textiles. It features an advanced control system for pattern input and editing, along with automatic thread trimming.

Product Overview

Industrial Precision Multi-Head Embroidery

This high-speed multi-head embroidery machine is engineered for high-efficiency production across a wide range of textile applications. Designed with robust construction for continuous industrial operation, it enables simultaneous embroidery across multiple heads to maximize throughput. The system includes an advanced control interface for seamless pattern input and precise design execution, supported by automated maintenance features like automatic thread trimming.

Operational Features

Key Automation Capabilities

- Simultaneous multi-head operation
- Automatic thread trimming
- Advanced pattern input system
- Integrated design editing

Suitable Applications

Garments, Home Textiles, Industrial Embroidery

Performance Metrics

Production Efficiency

1 Yes

Multi-head Simultaneous Capability
