

Multi-Layer Coextrusion Film Production Line

Multi-layer coextrusion blown film lines are designed for producing high-quality plastic films with multiple layers. These lines create films with properties suitable for a wide range of packaging applications.

Product Overview

High-Performance Multi-Layer Film Production

This multi-layer coextrusion blown film line is engineered for the precise production of advanced plastic films. By integrating multiple extruders, the system creates composite films with enhanced barrier properties, superior strength, and excellent printability. It is an ideal solution for manufacturers seeking to produce high-quality packaging materials with tailored functional characteristics.

System Components

Core System Components

- Extruder unit
- Die head
- Air ring
- Bubble cage
- Collapsing frame
- Winding unit

Capabilities

Primary Applications

Packaging
