

Multi-Layer Communication Cable

This communication cable features a multi-layered design for enhanced performance and safety. It is suitable for various communication applications requiring reliable and secure data transmission.

Product Overview

Advanced Multi-Layer Communication Cable

This multi-layer communication cable is engineered for high-performance data transmission in demanding environments. Featuring a specialized construction, it includes a central conductor protected by a robust fire-resisting layer and an outer insulating layer. This design ensures both electrical safety and signal integrity, making it a reliable solution for critical communication infrastructure requiring protection against high temperatures.

Construction Details

Cable Composition

- Central Conductor
- Fire-Resisting Layer
- Outer Insulating Layer

Design Advantages

Multi-Layer Shielding • Enhanced Durability

Key Features

Safety & Performance

Fire-Resistant, High-Temperature Protection, Electrical Safety, Signal Integrity
